

Build a Mud Wall

Let's put your design, engineering and construction skills to the test.

Will you take on the Mud Wall Challenge?

Making bricks out of mud is great fun

Your Mud Brick Recipe!

- Mix dirt and water in a bucket to make mud.
- Use a spoon to fill an ice cube tray with the mud, or pour it in.
- If you don't have an ice cube tray think about what else you could use.
- Once you've filled the ice cube tray, press down the top of the mud in each compartment with the back of a spoon.
- Let the bricks dry in the sun for about an hour

Or:

- Why not try cake cases and fill these with you mud mixture.
- If they are paper cake cases you could bake them in your oven until they are ready to build with (of course take care when using the oven and removing your cake case bricks).

Experiment with different mud consistencies.

- Does it help if you add small twigs, grass or gravel?
- Experiment with your building techniques to make it as strong as possible.
